

**Sustainability-Focused and Related Courses
Offered by
Denison University 2009 - 2011**

Sustainability-focused courses at Denison University explore relationships between humans and the environment. Working from a variety of perspectives, these courses explore and analyze at least two types of systems (i.e. cultural, social, economic, political, and/or ecological) and their ability to meet the needs of future generations. These courses purposefully connect actions with outcomes in their relation to environmental issues.

Sustainability-related courses at Denison include at least one clearly identified unit (more than one week) within the semester that meets the above definition.
